

Installing Mirth Connect Version 3.0.1

By: Akanksha Chandel

Download the stable mirth connect version:

It appears that versions after 3.0.1 are not showing up correctly in the archived downloads page. This is actually incorrect and they'll be taking a look at this. In the meantime the files for 3.0.2 are still available if you know the direct link. For instance you can download the Windows 64 bit version here.

<http://downloads.mirthcorp.com/conne...indows-x64.exe>

Modify the link as necessary to get the version you need.

Run exe files to install, find the desktop application and run it, if you are getting port engaged error which probably you will:

Directly go to the following URL:

<http://localhost:8080/webadmin/Index.action>

And Launch Mirth Connect Administrator

A file [webstart.jnlp](#) will be downloaded. Keep that file and open it.

Login into your default server <https://localhost:8443>

using user: **admin**

Password: **admin**

For first time you will get a registration window where you can change your username and password.

You will be able to launch Mirth Connect Administrator among your other application successfully!
